Environment

Playwright 1.63.0 · Node v25.6.0
Toolchain

5. Bonus — API / Network Validation

TEST CASE	CHROMIUM	FIREFOX	WEBKIT
assets API returns a well-formed, successful payload	PASS 3.6s	PASS 4.2s	PASS 3.9s
page surfaces the same pair count the API returned	PASS 3.9s	PASS 4.5s	PASS 5.0s

3. Content & Links

TEST CASE	CHROMIUM	FIREFOX	WEBKIT
marketing banner (mobile app promo) renders in the expected page region	PASS 3.5s	PASS 4.1s	PASS 4.8s
marketing banner is not shown at desktop widths (mobile-only placement)	PASS 3.6s	PASS 4.0s	PASS 4.8s
App Store and Google Play download links resolve correctly	FIXME	FIXME	FIXME
About Us > Why MultiBank page renders all expected components with correct headings and section text	FIXME	FIXME	FIXME

4. Negative / Edge Cases

TEST CASE	CHROMIUM	FIREFOX	WEBKIT
invalid route handling: unknown paths render a 404 without crashing	PASS 4.0s	PASS 4.9s	PASS 4.6s
broken link detection across every public navigation link	PASS 4.7s	PASS 4.8s	PASS 4.8s
viewport regression at a mobile breakpoint (375px)	PASS 3.9s	PASS 4.2s	PASS 5.1s
content loading timeout handling: pricing API failure degrades gracefully	PASS 4.5s	PASS 5.2s	PASS 5.1s

1. Navigation & Layout

TEST CASE	CHROMIUM	FIREFOX	WEBKIT
top navigation renders with all expected items visible	PASS 3.6s	PASS 4.1s	PASS 4.6s
"Home" nav item resolves to the correct destination	PASS 3.6s	PASS 5.5s	PASS 4.8s
"Markets" nav item resolves to the correct destination	PASS 3.9s	PASS 4.1s	PASS 4.4s
"Trade" menu exposes Spot, Instant Buy and Panic Sell, each resolving correctly	PASS 4.1s	PASS 4.3s	PASS 6.7s
"Log In" and "Sign Up" open their respective auth pages	PASS 4.1s	PASS 5.2s	PASS 6.9s
nav stays fully expanded at 1280x800 (small laptop)	PASS 3.4s	PASS 3.6s	PASS 6.2s
nav stays fully expanded at 1440x900 (standard laptop)	PASS 3.2s	PASS 3.8s	PASS 6.0s
nav stays fully expanded at 1920x1080 (full HD)	PASS 3.9s	PASS 4.1s	PASS 5.6s

2. Trading Functionality

TEST CASE	CHROMIUM	FIREFOX	WEBKIT
spot trading section renders and displays trading pairs	PASS 3.8s	PASS 3.8s	PASS 6.2s
trading pairs are correctly grouped into categories	PASS 4.2s	PASS 6.2s	PASS 6.7s
"Favorites" category renders an empty state for a signed-out visitor	PASS 3.9s	PASS 4.3s	PASS 5.7s
trading pair entries contain the expected data fields	PASS 3.8s	PASS 3.9s	PASS 6.0s
every row exposes Details and Trade actions	PASS 2.0s	PASS 3.4s	PASS 5.5s

Documented gaps (test.fixme) — 2 scenarios × 3 browsers

- **App Store / Google Play download links.** Confirmed (via the app's own i18n bundle keys "app-store"/"google-play" under "trade-on-the-go") to live only on the authenticated homepage template. Unreachable without logging in, which the brief explicitly disallows.
- **About Us > Why MultiBank page.** Same gated-homepage constraint; no standalone public route exists today (/about-us, /why-multibank, /about-us/why-multibank all return 404).

Real findings surfaced during verification (not test defects — see docs/RISK_MATRIX.md)

1. **Loading-skeleton race condition (fixed in the suite).** /markets briefly renders a loading skeleton with different header copy and column counts before hydrating; "Favorites" additionally uses a permanently different column schema, and mobile viewport collapses columns further. Headless execution usually outran this; headed/slower execution caught it. Fixed by waiting on hydrated "\$"-priced row content rather than any specific header label.
2. **Trade-menu link href briefly empty under heavy concurrent load.** Observed once across 5 parallel workers × 3 browsers; not reproducible in 10/10 isolated attempts. Hardened the assertion to wait for a non-empty href first; CI's retry policy (2 retries) also absorbs this class of transient noise.
3. **Live Cloudflare 502 from trade.mb.io** hit once mid-verification (real production infrastructure blip, confirmed via the actual Cloudflare error page content, resolved within seconds). Not a suite defect — evidence the target is a live third-party system, which is exactly why CI runs with retries.
